

Paw Investigando resposta da API

The screenshot displays the Paw HTTP client interface. The top bar shows the current request: GET https://bonates.com/nsbrazil19/deals.json, with a status of 200 OK and a response time of 1.34 s. The left sidebar lists the active session, 'Deals Listing', and the request description, 'Request Description'. The main panel shows the 'Deals Listing' tab selected, displaying the request details. The right panel shows the 'Response' tab, displaying the JSON response in 'JSON Text' view. The JSON response is a list of deals, each with a 'deal_type' field. A red arrow points from the 'Deals Listing' tab to the 'JSON Text' view of the response. Another red arrow points from the 'Key Path' field at the bottom to the 'response.deals.*.deal_type' path in the JSON data.

Key Path response.deals.*.deal_type

```
1 {
2   "response": {
3     "deals": [
